ACKNOWLEDGMENTS	ii
ABSTRACT	vii
CHAPTERS	
1. INTRODUCTION	1
1.1 Semiconductor Manufacturing	2
1.2 Job Shop Scheduling	4
1.3 Look-ahead and Look-behind Scheduling	4
1.4 Setups.	5
1.5 Smart-and-lucky Searches	6
1.6 Problem Space and Heuristic Space	8
1.7 Objective Functions.	8
1.8 Overview of Research	9
1.9 Plan of Dissertation	10
2. BACKGROUND	13
2.1 Semiconductor Test Operations	13
2.2 Semiconductor Scheduling.	16
2.2.1 Production Planning	17
2.2.2 Shop Floor Control	19
2.2.3 Performance Evaluation	32
2.2.4 Summary	35
2.3 Job Shop Scheduling	36
2.3.1 Scheduling Notation	36
2.3.2 Shifting Bottleneck	37
2.3.3 Dispatching Rules	39
2.3.4 Summary	45
2.4 Flow Shop Scheduling	45
2.4.1 Makespan	46
2.4.2 Total Flowtime	46
2.4.3 Maximum Lateness (L_{max})	50
2.4.4 Number of Tardy Jobs	51

2.4.5	General Topics	52
2.4.6	Summary	55
2.5	Look-ahead and Look-behind Scheduling	55
2.6	Class Scheduling	57
2.7	Some One-machine Problems	60
2.7.1	Constrained Flowtime	61
2.7.2	Release and Due Dates	61
2.7.3	Flowtime and Release Dates	62
2.8	Smart-and-lucky Searches	64
2.8.1	Introduction	64
2.8.2	Simulated Annealing	64
2.8.3	Tabu Search	67
2.8.4	Genetic Algorithms	70
2.8.5	Summary	75
2.9	Problem and Heuristic Space	75
2.10	NP-Completeness	77
2.11	Chapter Summary	78
3.	ONE-MACHINE CLASS SCHEDULING PROBLEMS	80
3.1	Introduction	80
3.2	Constrained Flowtime with Setups	81
3.2.1	Introduction	81
3.2.2	Literature Review	84
3.2.3	Notation and an Optimal Property	85
3.2.4	The Heuristic	87
3.2.5	The Genetic Algorithm	91
3.2.6	Empirical Testing	100
3.2.7	Conclusions	104
3.3	Class Scheduling with Release and Due Dates	104
3.3.1	Introduction	105
3.3.2	Literature Review	105
3.3.3	Notation and Problem Formulation	106
3.3.4	Heuristics	106
3.3.5	Analysis of the Heuristic	109
3.3.6	The Genetic Algorithm	113
3.3.7	Empirical Tests and Results	115
3.3.8	Extension to Minimizing Tardiness	120
3.3.9	Conclusions	123
3.4	Flowtime with Setups and Release Dates	124
3.4.1	Introduction	124
3.4.2	Notation and Problem Formulation	125
3.4.3	Background	125
3.4.4	Solution Techniques	126

3.4.5	Empirical Testing	134
3.4.6	Special Case	136
3.4.7	Conclusions	140
3.5	Chapter Summary	141
4.	LOOK-AHEAD SCHEDULING PROBLEMS	142
4.1	Introduction	142
4.2	Minimizing the Makespan	145
4.2.1	Notation	145
4.2.2	Johnson's Algorithm	146
4.2.3	Permutation Schedules	147
4.2.4	NP-Completeness	149
4.2.5	Makespan Optimality Conditions and Polynomially-Solvable Cases	150
4.2.6	Branch-and-Bound Algorithm	158
4.2.7	Heuristics	160
4.2.8	Empirical Results	160
4.2.9	Heuristic Error Bounds	162
4.3	Minimizing the Total Flowtime	164
4.3.1	Total Enumeration	165
4.3.2	Lower Bounds	167
4.3.3	Special Case	168
4.3.4	Empirical Testing	169
4.4	Minimizing the Number of Tardy Jobs	170
4.4.1	Problem Introduction	170
4.4.2	Lower Bound and Special Case	171
4.4.3	Heuristics	172
4.4.4	Results	173
4.5	Application to Job Shop Scheduling	174
4.6	Chapter Summary	175
5.	GLOBAL JOB SHOP SCHEDULING	177
5.1	Introduction	177
5.2	Job Shop Scheduling	179
5.3	A Genetic Algorithm for Job Shop Scheduling	181
5.3.1	The Heuristic Space	182
5.3.2	A Genetic Algorithm for Global Scheduling	185
5.4	Global Job Shop Scheduling	187
5.4.1	The Semiconductor Test Process	187
5.4.2	The Previous Scheduling System	190
5.4.3	Scheduling Needs	191
5.4.4	Scheduling System Design	192
5.4.5	Information Requirements	193

5.4.6	Implementation of Global Scheduling	195
5.4.7	Implementation Issues	197
5.4.8	Contributions of Global Scheduling	199
5.5	Chapter Summary	200
6.	SUMMARY AND CONCLUSIONS	201
6.1	One-machine Class Scheduling Problems	201
6.2	Look-ahead Scheduling	202
6.3	Searching for Job Shop Schedules	202
6.4	Conclusions	203
